

# How to Use a Virtual Private Network (VPN)?

---

In order to access the servers of 67-272, you will need to be connected to the CMUQ network. Hence, please connect to the CMU Virtual Private Network (VPN) using the Cisco AnyConnect VPN client

When you connect your computer or mobile device to the CMUQ VPN, your device will act as if it's on campus. This means you'll be able to securely access all CMUQ resources from home, or even when you're out of the country.

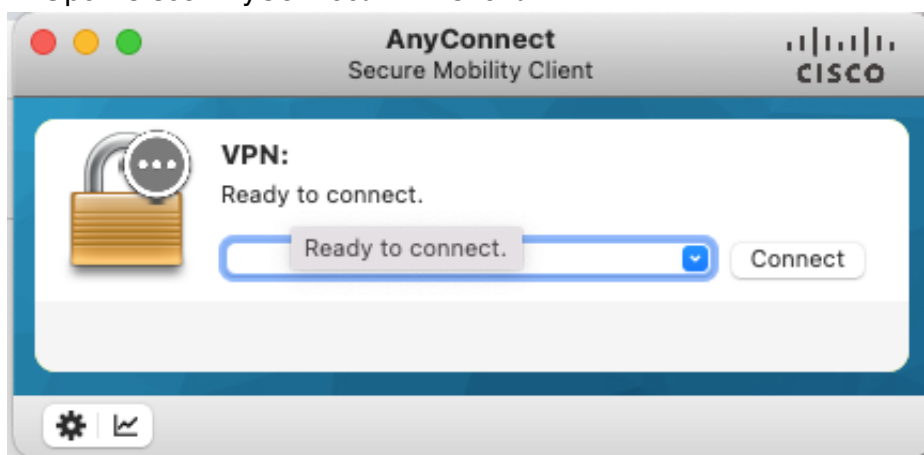

Please follow the steps below to connect to the CMUQ VPN:

- 1- Go to: <https://www.cmu.edu/computing/services/endpoint/network-access/vpn/how-to/>
- 2- Download the Cisco AnyConnect VPN Client

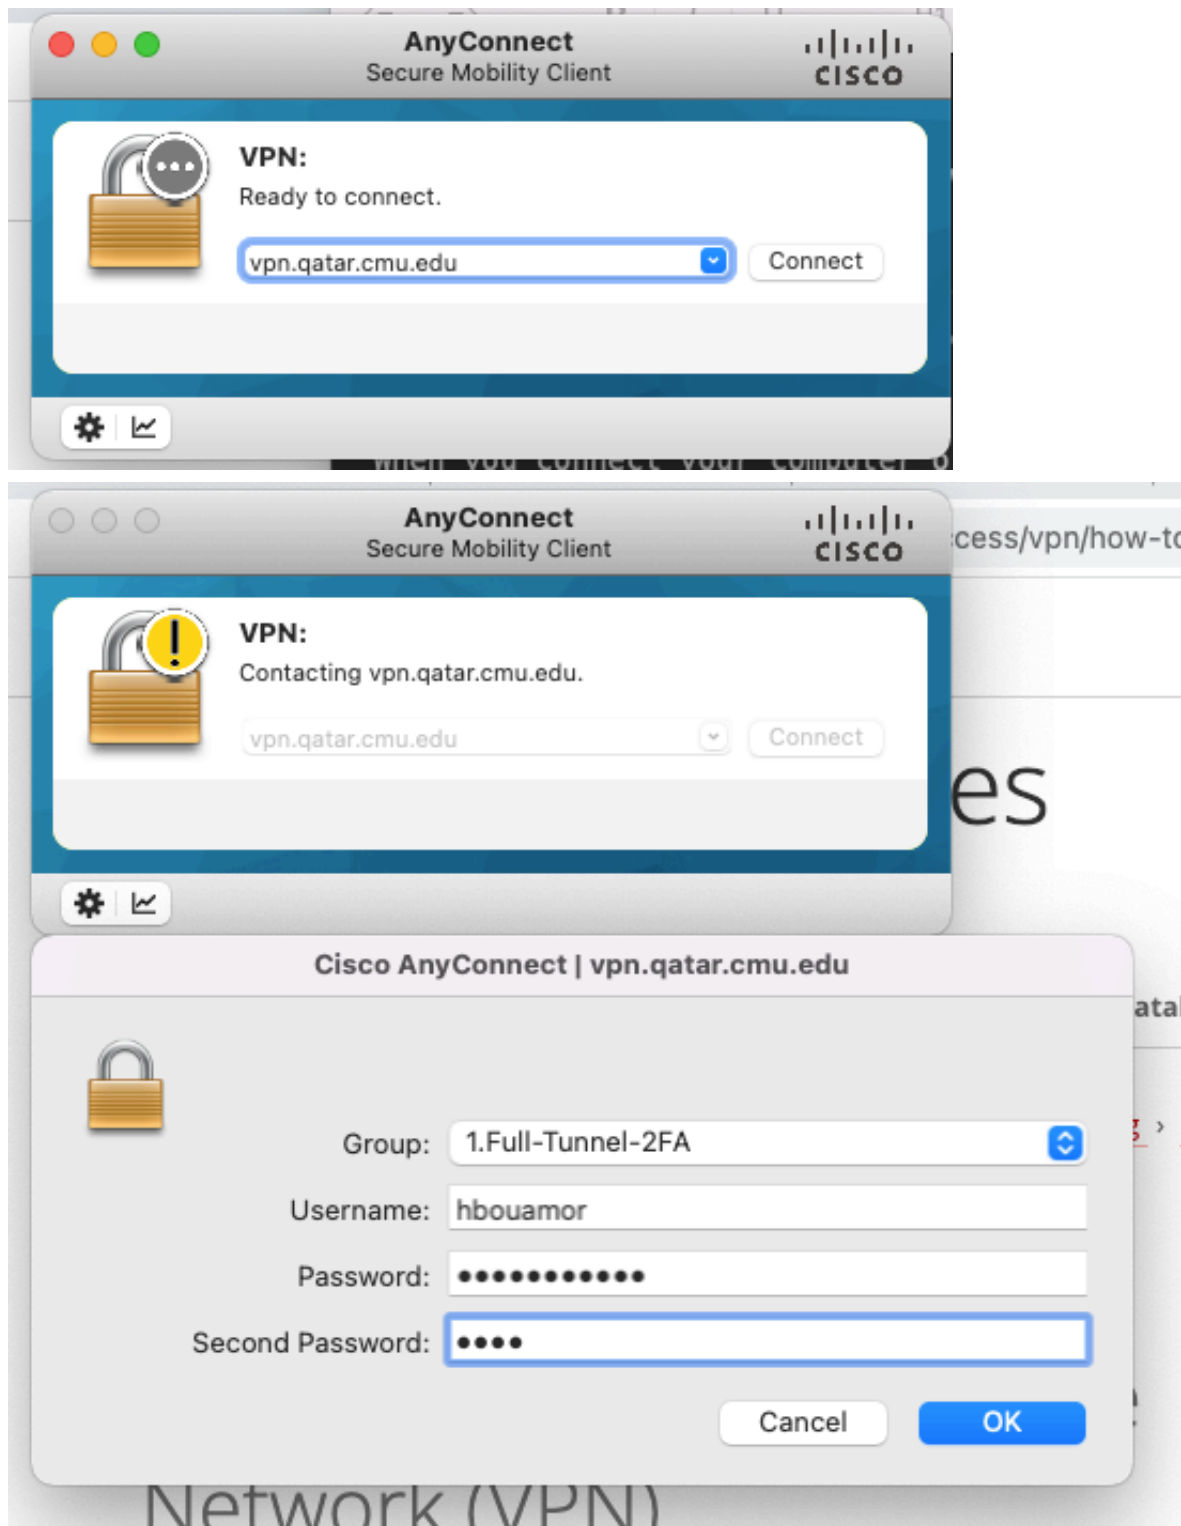

- 3- Install Cisco AnyConnect VPN Client

- 4- Open Cisco AnyConnect VPN Client

- 5- Connect to: `vpn.qatar.cmu.edu` using your Andrew ID, your password, and for the 2nd password type `push` This will send you a notification in your Duo application.

**\*\*Now that you are connected, you can start the lab! \*\***
